

READING ACTIVITY: WHAT DO BEES EAT ?

NAME : _____

Bees eat nectar. It is the sweet, sugary liquid inside flowers. Bees are crazy about nectar!

Bees go from flower to flower, collecting nectar and pollen. As a bee visits flowers it brings pollen with it to new flowers.

Once a flower gets pollen from another flower of the same kind, it can start to make seeds. These seeds will grow into new plants.

The plants get pollinated and the bees get nectar and bring more pollen home to feed the babies. Everyone wins!

FILL IN THE GAPS

- _____ is a sweet sugary _____ found in a flower.
