

READING ACTIVITY: ARE POLLINATORS IN DANGER ?

NAME : _____

Thirty percent of our hard-working pollinators are in danger of disappearing forever and becoming extinct.

They are in trouble because of a lack of flowers to provide food called nectar and pollen. They also have less places to live and hibernate, safe habitats.

We need bees to help pollinate our crops. About one third of all the food we eat is pollinated by bees.

FILL IN THE GAPS

- Pollinators are in _____ of becoming _____.
- Bees need flowers to provide _____ and pollen.
- They needs _____ places to _____ and live.
- Bees are very _____ in pollinating our _____.
- One _____ of our food is _____ by bees.

Key Words

Danger extinct hibernate pollinated
